The data/information given in the Handbook have been updated using, Steel is a strong material that is highly resistant to shaping at normal temperatures but this resistance lessens considerably at higher temperatures., Steel is an alloy of iron and carbon and other elements. Because of its high tensile strength and low cost, it is a major component used in buildings, infrastructure, tools, ships, automobiles, machines, appliances, and weapons.. Iron is the base metal of steel. Iron is able to take on two crystalline forms (allotropic forms), body centered cubic (BCC) and face centered cubic (FCC), depending ... , The design process encompasses the architectural design, the development of the structural concept, the analysis of the steel structure and the verification of members. Steel solutions are lighter than their concrete equivalents, with the opportunity to provide more column-free flexible floor space, less foundations and a
