Assessment Handbook 1 INTRODUCTION  
Heating, Ventilating, and Air Conditioning  
(HVAC) relates to systems that perform  
processes designed to regulate the air  
conditions within buildings for the comfort  
and safety of occupants or, Heating,  
ventilation, and air conditioning (HVAC) is  
the technology of indoor and vehicular  
environmental comfort. Its goal is to provide  
thermal comfort and acceptable indoor air  
quality. HVAC system design is a  
subdiscipline of mechanical engineering,  
based on the principles of thermodynamics,  
fluid mechanics and heat  
transfer. "Refrigeration" is sometimes added  
to the field's abbreviation, as ..., This  
handbook is not intended to be a

comprehensive guide to all accepted  
practices relating to the design of  
laboratories, their HVAC systems and  
controls., HVAC Engineering Fundamentals:  
Part 1 3 durable way. The results of the  
value engineering process now permeate  
our lives, and the techniques are pervasive in  
business., A dedicated outdoor air system  
(DOAS) is a type of heating, ventilation and  
air-conditioning system that consists of two  
parallel systems: a dedicated system for  
delivering outdoor air ventilation that handles  
both the latent and sensible loads of  
conditioning the ventilation air, and a parallel  
system to handle the (mostly sensible heat)  
loads generated by indoor/process sources  
and those ..., The Gateway to Up-To-Date

The integration of personalized thermal comfort in the operation of HVAC systems has been shown to be highly

effective in enhancing energy efficiency of buildings., Note: Do not assume these values to be LAWS. They are only typical values, which SHOULD BE VERIFIED for each application.
