Eliminates manual lifting and chance of
injury., A lock is a device used for raising and
lowering boats, ships and other watercraft
between stretches of water of different levels
on river and canal waterways.The
distinguishing feature of a lock is a fixed
chamber in which the water level can be
varied; whereas in a caisson lock, a boat lift,
or on a canal inclined plane, it is the chamber
itself (usually then called a caisson) that rises
