is an interface standard for a serial bus for high-speed communications and isochronous real-time data transfer. It was developed in the late 1980s and early 1990s by Apple, which called it FireWire. The 1394 interface is also known by the brands i.LINK (), and Lynx (Texas Instruments).. The copper cable it uses in its most common implementation can be up to 4.5 metres (15 ft) long., USB (abbreviation of Universal Serial Bus) is an industry standard that establishes specifications for cables, connectors and protocols for connection, communication and power supply between personal computers and their peripheral devices.. There have been three generations of USB specifications: USB 1.x USB 2.0, with multiple updates and additions; USB 3.x, hp ProLiant network adapter teaming table of contents ex overview of network addressing hp networking june 2003 technical white paper introduction 2, Slide 4 Why so many 1394 specifications?
