development life cycle (SDLC), also referred
to as the application development life-cycle,
is a term used in systems engineering,
information systems and software
engineering to describe a process for
planning, creating, testing, and deploying an
information system., History. The software
development methodology (also known as
SDM) framework didn't emerge until the
1960s. According to Elliott (2004) the
systems development life cycle (SDLC) can
be considered to be the oldest formalized
methodology framework for building
information systems., Ever since the agile
manifesto was created in 2001, the research
community has devoted a great deal of
attention to agile software development.,
