Theory Automata theory is basically about  
the study of different mechanisms for  
generation and recognition of languages.  
Automata theory is basically for the study of  
different types of grammars and automata. A  
grammar is a mechanism for the generation  
of sentences in a language., Alberto

Let  $n$  be the pumping-lemma constant (note this  $n$  is unrelated to the  $n$  that is a local variable in the definition of the language  $L$ ). Pick  $w = 0^n 1 0^n$ . Then when we write  $w = xyz$ , we know that  $|xy| \leq n$ , and therefore  $y$  consists of only 0's., Introduction to Formal Languages , Automata Theory and Computation " Theory of Computer Science ...
