Reconciliation, GPFS TERMINOLOGY 1/2 5
Cluster - This consists of a number of nodes
and network shared disks (NSDs) for
management purposes. Storage Pool - This
groups a file system's storage and allows a
user to partition storage based on
characteristics such as performance, locality
and reliability. Node - This is an individual
OS instance within a cluster. Nodeset - This
is a group of nodes that are all ...,

Introduction & Summary Computer system
users, administrators, and designers usually
have a goal of highest performance at lowest
cost. Modeling and simulation of system
design trade off is good preparation for
design and engineering decisions in real
world jobs., Distributed computing is a field of
computer science that studies distributed
systems. A distributed system is a system
whose components are located on different
networked computers, which then
communicate and coordinate their actions by
passing messages to each other. The
components interact with each other in order
to achieve a common goal. Three significant
characteristics [why?] of ..., MatrikonOPC â€œ
