The goals of learning are understanding and prediction. Learning falls

into many categories, including supervised learning, unsupervised learning, online learning, and reinforcement learning.From the perspective of statistical learning theory, supervised learning is best understood. Supervised learning involves learning from a training set of data., Introduction. Statistical inference makes propositions about a population, using data drawn from the population with some form of sampling.Given a hypothesis about a population, for which we wish to draw inferences, statistical inference consists of (first) selecting a statistical model of the process that generates the data and (second) deducing propositions from the model., Sampling theory, Introduction and Reasons to Sample. Often we are interested in drawing some valid conclusions (inferences) about a large group of individuals or objects (called population in statistics)., Quick Notes - Statistics by Walter Antoniotti - 21st Century Learning Products Walter Antoniotti's book is for people with a limited mathematics background who want to learn the material covered in a traditional college statistics course and for people who want to learn
