MEMB113 | MANUAL DRAWING | CHAPTER 6 6.266..226.2 Isometric projection – Isometric projection is a true representation of the isometric view of an object – Isometric view is created by rotating the object 45 degree about vertical axis, and tilting it forward 35, Sheet 12: ISOMETRIC PROJECTIONS Introduction : In engineering field, it is normal to draw two or more than two orthographic projections to give the shape and size of the object. Some time, less experienced technician often required hard exercise of the brain to visualize the orthographic projections. To make it, Isometric scale: Isometric projection is drawn using isometric scale, which converts true lengths into isometric lengths (foreshortened) Construction of isometric scale: Draw a horizontal line AB. From A

draw a line AC at 45o to represent actual or true length and another line AD at 30o to AB to measure isometric length., Isometric drawing (sketching or instruments) In isometric drawing three sides of the item are shown, all in dimensional proportion, but none is shown as a true shape with 90° corners. Isometric box The best way to do an isometric drawing is to imagine a box which would exactly hold the item you want to draw., General arrangement drawings are also developed for individual equipments. These drawings present the main dimensions of that equipment using 2D views, top-view, side-view and sometimes front-view. All the nozzles for concerned equipment are indicated on the equipment General Arrangement or GA drawing., In the manufacturing unit of piping system we use cad software, for designing pipes in 3D we use piping isometric drawing, in the process of designing those models we learn how to read piping isometric drawing and we offer some isometric drawing exercises pdf links in our website for getting clear idea on how to draw an isometric drawing., Axonometric (Isometric) Drawing Easy to understand
