Search results, Johan Håstad is a theoretical computer scientist best known for his work on complexity theory. He has received two Gödel prizes, one in 1994 for his work on circuit lower bounds and one in 2011 for his work on hardness of approximation. Numerical analysis is the study of algorithms that use numerical approximation (as opposed to general symbolic manipulations) for the problems of mathematical analysis (as distinguished from discrete mathematics). One of the earliest mathematical writings is a Babylonian tablet from the Yale Babylonian Collection (), which gives a sexagesimal numerical approximation of the square root of 2 ...  
Electrostatics is a branch of physics that studies electric charges at rest. Since classical physics, it has been known that some materials such as amber attract lightweight particles after rubbing. The Greek

word for amber, ἤλεκτρον, or electron, was the source of the word 'electricity'. Electrostatic phenomena arise from the forces that electric charges exert on each other.
