Using Digital Signal Processing to Improve Loudspeaker Performance, With an awareness that today's audio production is carried out in a wide range of acoustic environments, JBL engineers employ a set of measurements to predict how a loudspeaker will behave in actual room, The dominant nonlinear parameters in a driver are the force factor  $Bl(x)$ , the stiffness of suspension  $K_{ms}(x)$ , and the electrical inductance  $L_e(x)$ . The effect of  $Bl(x)$  and  $K_{ms}(x)$  should decrease as  $1/\omega^2$  with frequency, but since the inductance increases as  $\omega L_e$  its effect should only decrease as  $1/\omega$  and possibly overtake the effects of ..., View and Download Electro-Voice X-Array XB

The electrical power delivered to the loudspeaker, together with its efficiency, determines the sound power generated (with the rest of the electrical power being converted to heat)., The ear drum signals also contain cues about the room, though colored in the case of a loudspeaker that radiates a different spectrum in different directions., Browser Compatibility Issue: We no longer support this version of Internet Explorer.
