floating point operations per second (FLOPS,

flops or flop/s) is a measure of computer

performance, useful in fields of scientific

computations that require floating-point

calculations. For such cases it is a more

accurate measure than measuring

instructions per second.. The similar term

FLOP is often used for floating-point

operation, for example as a unit of counting

is a dedicated microprocessor designed to

handle the calculations of physics, especially

in the physics engine of video games..

Examples of calculations involving a PPU

might include rigid body dynamics, soft body

dynamics, collision detection, fluid dynamics,

hair and clothing simulation, finite element

analysis, and fracturing of objects., 2 Hans

Make everything on your computer faster Memory is a component in your computer that allows for short-term data access. Since your system's moment-to-moment operations rely on short-term data access

loading applications, browsing the Web or editing a spreadsheet

the speed and amount of memory in your system plays a critical role.

We would like to take this opportunity to congratulate you on your selection of the latest addition to the growing family of Revelation Accounting products - a range

that we consider to be one of the most exciting and innovative locally developed Business Systems to be released into the South African market in recent years.

Subversion is a free/open source version control system (VCS). That is, Subversion manages files and directories, and the changes made to them, over time. This allows you to recover older versions of your data or examine the history of how your data changed.
