Dialysis and Chronic Kidney Disease
Programs Associate Professor of Clinical
Medicine, Hemodialysis, also spelled
haemodialysis, commonly called kidney
dialysis or simply dialysis, is a process of
purifying the blood of a person whose
kidneys are not working normally. This type
of dialysis achieves the extracorporeal
removal of waste products such as creatinine
and urea and free water from the blood when
the kidneys are in a state of kidney failure.,

+ 1 (978) 635-8670, A hernia is the abnormal
exit of tissue or an organ, such as the bowel,
through the wall of the cavity in which it
normally resides. Hernias come in a number
of different types. Most commonly they
involve the abdomen, specifically the groin.
Groin hernias are most common of the
inguinal type but may also be femoral. Other
hernias include hiatus, incisional, and
umbilical hernias.
