Search results, 2 MATHEMATICS FOR ECONOMISTS c) We know m but need to compute b . Here $m = 5/4$, so the function is of the form $f(x) = 5/4x + b$. When $x=1$, $f(x) = 1$, so b has to solve the equation $1 = 5/4 + b$. Thus, $b = 1 - 5/4 = -1/4$ and $f(x) = 5/4x - 1/4$. d) Here $m = 1/2$, so the function is of the form $f(x) = 1/2x + b$. When $x=2$, $f(x) = 2$, thus b has to solve the equation $2 = 1 + b$, so $b = 1$ and $f(x) = 1/2x + 1$.

A-level maths are able to build up their confidence, this is not a watered-down type of textbook. As the book progresses the pace is increased and students are expected to put in a serious amount of time and effort to master the material., Basic

Its main purpose is to provide, the task of mathematics to validate the assumptions of the model, i.e., whether the model describes the real world sufficiently well. Verification or falsification of the model is the task of economists., Many of the topics that are the bread-and-butter of mathematical economics (concavity and convexity, Kuhn-Tucker optimization) simply never came up in my undergraduate courses.
