end-face mechanical seal, or a mechanical end-face seal, also referred to as a mechanical face seal but usually simply as a

mechanical seal, is a type of seal utilised in rotating equipment, such as pumps, mixers, blowers, and compressors.When a pump

operates, the liquid could leak out of the pump between the rotating shaft and the

stationary pump casing., We offer a wide selection of mechanical seal options for top entry mixers and bottom entry agitators on sealed tanks. Ensure a pressure tight seal for your closed vessel mixing system with our mechanical seals!, A bearing is a machine element that constrains relative motion to only the desired motion, and reduces friction between moving parts.The design of the bearing may, for example, provide for free linear movement of the moving part or for free rotation around a fixed axis; or, it may prevent a motion by controlling the vectors of normal forces that bear on the moving parts., We manufacture certified sanitary mechanical seals to comply with FDA and cGMP requirements for all industrial mixing applications. Free estimates and fast turnarounds!, The Gateway to Up-To-Date Information on Integrated 'Whole Building' Design Techniques and Technologies. The goal of 'Whole Building' Design is to create a successful high-performance building by applying an integrated design and team approach to the project during the planning and programming phases.. The boundaries are either enforced by walls and a lid, or sometimes just walls, with the "lid" implied by the requirement that no piece extends beyond the level of the walls., Benefits that go straight to your bottom line High accuracy: Stable, repeatable flows are assured under varying conditions of temperature, viscosity

and pressure. Uniform flow: Unique design offers virtually pulseless flow without valves or flexible elements that add complexities, increase cost and hinder performance., There are a wide variety of insulation materials, facings, and accessory products available for use on mechanical systems. The list changes continuously as existing products are modified, new products are developed, and other products are phased out., I. Thermoplastics (commodity): Polyethylene (PE) Description The material POLYETHYLENE,  $(-CH_2-)_n$ , first synthesized in 1933, looks like the simplest of molecules, but, Search in SWAGELOK catalogs and technical brochures on DirectIndustry and find the information you need in 1 click., View PDF version.
