1.2 FREE VIBRATIONS- EXAMPLES A free vibration is one that occurs naturally with no energy being added to the vibrating system. The vibration is started by some input of energy but the vibrations die away with time as the energy, Vibration is a mechanical phenomenon whereby oscillations occur about an equilibrium point. The word comes from Latin vibrationem ("shaking, brandishing"). The oscillations may be periodic, such as the motion of a pendulum or random, such as the movement of a tire on a gravel road..

Vibration can be desirable: for example, the motion of a tuning fork, the reed in a woodwind instrument or ..., Benefits.
