Contact mechanics is the study of the deformation of solids that touch each other at

one or more points. A central distinction in contact mechanics is between stresses

acting perpendicular to the contacting bodies' surfaces (known as the normal direction) and

frictional stresses acting tangentially between the surfaces. This page focuses mainly on

the normal direction, i.e. on frictionless ..., Porous materials are a frequent subject of

investigation in many areas of applied science and engineering, such as soil

mechanics, rock mechanics, petroleum engineering, construction engineering,

hydrogeology, geophysics or food science., See also Nonlinear partial differential

equation, List of partial differential equation

topics and List of nonlinear ordinary

differential equations, 3 This white paper discusses the salient features regarding the

mechanics and finite element analysis (FEA) of elastomers. Although the main focus of the

paper is, 1 Learning Module 6 Linear Dynamic Analysis Title Page Guide What is a
