Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this., DB2 UDB maintains a set of special tables called the system catalog. These tables, which contain the metadata that describes database objects, have two sets of views defined on them: read-only views under the SYSCAT schema and updatable views under the SYSSTAT schema. This article introduces the DB2 UDB system catalog, and shows how this rich repository of database information can be
