The drug is most commonly an organic small molecule that activates or inhibits the

function of a biomolecule such as a protein, which in turn results in a therapeutic benefit to the patient., Built to perform: A facile, one-step hydrothermal method is used to synthesize a 3D, symmetric, flowerlike Sb₂S₃ nanostructure (see figure) for application as a photoelectric material. The structure is composed of numerous nanoneedles, which provided a large void fraction and specific surface area, and has better electrocatalytic activity and charge-transfer ability than that of platinum., About Green Chemistry. The home of cutting-edge research on the development of alternative sustainable technologies., Analytical and Bioanalytical Chemistry Research . This journal is open access for everything with completely Free-of-Charge publication policy.
