Largo, Maryland, General relativity (GR, also  
known as the general theory of relativity or  
GTR) is the geometric theory of gravitation  
published by Albert Einstein in 1915 and the  
current description of gravitation in modern  
physics. General relativity generalizes special  
relativity and Newton's law of universal  
gravitation, providing a unified description of  
gravity as a geometric property of space and  
time ..., Some of the major unsolved  
problems in physics are theoretical, meaning  
that existing theories seem incapable of  
explaining a certain observed phenomenon  
or experimental result. The others are  
experimental, meaning that there is a  
difficulty in creating an experiment to test a  
proposed theory or investigate a  
phenomenon in greater detail.. There are still  
some deficiencies in the Standard ...,

experimental science, and as such the  
experimental basis for any physical theory is

extremely important. The relationship between theory and experiments in modern science is a multi-edged sword: GENERAL INFORMATION. A) - In addition to the official lectures, several seminars on related subjects will be held by visiting scientists. B) - The scientific organization and direction of the Course are entrusted to the Directors. G eant 4 is a toolkit for simulating the passage of particles through matter. It includes a complete range of functionality including tracking, geometry, physics models and hits. The physics processes offered cover a comprehensive range, including electromagnetic, hadronic and optical processes, a large set of long-lived particles, materials and elements, over a wide energy range starting, in ..., The industrial and manufacturing engineering department provides advisement to students interested in the general field of engineering, but who have not yet declared a specific discipline. A node is usually referred to by its order  $i$  in the set  $N$ . In a undirected graph, each of the links is defined by a couple of nodes  $i$  and  $j$ , and is denoted as  $(i, j)$  or  $|ij$ . The link is said to be

incident in nodes  $i$  and  $j$ , or to join the two nodes; the two nodes  $i$  and  $j$  are referred to as the end-nodes of link  $(i, j)$ . Two nodes joined by a link are referred to as adjacent or neighboring.
