diversification into a variety of other fields

that require rigor and a combination of

creative and analytical skills., The Feynman

Lectures on Physics is a physics textbook

based on some lectures by Richard P.

Feynman, a Nobel laureate who has

sometimes been called "The Great

Explainer". The lectures were presented

before undergraduate students at the

California Institute of Technology (Caltech),

during 1961–1963. The book's co-authors

are Feynman, Robert B. Leighton, and

Matthew Sands., Our goal is to provide an

environment where we leverage the best

local, national, and international talent to

contribute to our research and our

innovations. At Fermilab we strive for

excellence in our scientific research, research collaborations, user experience and workforce teams. Diversity of thought, culture and human identity accelerate the laboratory's research excellence. A geometric object has symmetry if there is an "operation" or "transformation" (such as an isometry or affine map) that maps the figure/object onto itself; i.e., it is said that the object has an invariance under the transform. For instance, a circle rotated about its center will have the same shape and size as the original circle—all points before and after the transform would be ...

General Science Minor. The minor in General Science requires 18 hours, six of which must be advanced. These must be divided among three of the following: biology, chemistry, physics and science courses.

Online homework and grading tools for instructors and students that reinforce student learning through practice and instant feedback.

Courses offered by the Department of Physics are listed under the subject code PHYSICS on the Stanford Bulletin's ExploreCourses web site. Mission of the

Undergraduate Program in Physics, "From conservation of energy to the principle of least action: A story line," Jozef Hanc and Edwin F. Taylor, American Journal of Physics, Vol. 72, No. 4, April 2004, pages 514-521. Conservation of energy is sufficient to predict motion in one dimension and for systems whose motion can be expressed as one independent coordinate.

Statistical physics is a core component of most undergraduate (and some post-graduate) physics degree courses. It is primarily concerned with the behavior of matter in bulk—from boiling water to the superconductivity of metals.

Summer Internships in Science & Technology (SIST) offers undergraduate sophomores and juniors majoring in physics, engineering (mechanical, electrical and computer), materials science, mathematics and computer science the opportunity to conduct research with Fermilab scientists and engineers.
