A rack and pinion is a type of linear actuator  
that comprises a pair of gears which convert  
rotational motion into linear motion. A circular  
gear called "the pinion" engages teeth on a  
linear "gear" bar called "the rack"; rotational  
motion applied to the pinion causes the rack  
to move relative to the pinion, thereby  
translating the rotational motion of the pinion  
into linear motion., This is a simple bike rack  
constructed from 3/4. I like this design a lot.  
Only things I might do differently would be  
add little 4-5" legs so the wheel sits down IN  
the rack, and the tire is slightly off the  
ground., CONTROL VALVE HANDBOOK

Multiple Bike Parking The Cora Expo Series is the proven solution where multiple bicycle parking spaces are required in a compact space. As Australia's most popular bike rack design, the Expo Series offers an attractive, secure and versatile facility that is safer, single operator material handling. Convey raw metal pipes and tubes onto the machine bed to be cut and profiled by a single operator. Roller bed CNC pipe profilers have proven to be more efficient and safer for all involved., Best Practices. For information on the design, selection and installation of bicycle parking and changing facilities see Browning (1999), APBP (2010) and DfT (2003).
