PLEOMORPHIC SARCOMA MALIGNANT
FIBROUS HISTIOCYTOMA OF PDF -

Search results, Because this tumor is usually high grade, it demonstrates a high index of mitotic activity and the cell types usually found are malignant fibroblasts mixed with anaplastic pleomorphic histiocytes.

ABSTRACT: Malignant fibrous histiocytomas (MFHs), newly named as "undifferentiated pleomorphic sarcoma"™ in 2002 by the World Health Organization, generally show an ambiguous origin. They have been described to, The most common types of sarcoma in adults are undifferentiated pleomorphic sarcoma (previously called malignant fibrous histiocytoma), liposarcoma, and leiomyosarcoma. Certain types occur more often in certain areas of the body than others.

Keywords: Brain tumors; primary intracranial fibrous histiocytomas; pleomorphic malignant fibrous histiocytoma; immunohistochemistry.

1. INTRODUCTION

Primary intracranial fibrous histiocytomas (FHTs) are rare entities some few cases have been reported. The mesenchymal

origin of fibrohistiocytic tumors (FHT) remains controversial [1,2]. Among the 33 cases, 17 cases (51.5%) of MFH had their diagnoses changed, including 5 leiomyosarcomas, 3 malignant peripheral nerve sheath tumors, 1 fibrosarcoma, 1 inflammatory myofibrosarcoma, 1 giant cell tumor, and 1 angiomatoid fibrous histiocytoma. We evaluated two primary gastric and three metastatic intestinal high-grade pleomorphic sarcomas with features of storiform-pleomorphic MFH. Gastric tumours occurred in a 79-year-old man and a 68-year-old woman. One patient died post-operatively, and the other was disease-free at 6 months. Weiss and Goldblum have introduced the chapter in their book on soft-tissue tumors published in 2007, as "Malignant Fibrous Histiocytoma (Pleomorphic Undifferentiated Sarcoma)." Historically, the first publication that defined the lesion was by Arthur Purdy Stout, who described the entity of fibrosarcoma of soft tissues. Undifferentiated pleomorphic sarcoma (UPS), previously known as malignant fibrous histiocytoma (MFH), is rarely reported in the liver as a

primary site. We report a case of a previously healthy 56-year-old male, who presented with abdominal pain and jaundice., Pleomorphic Sarcoma of Breast: A Report of Two Cases and Review of Literature Sarcomas account for less than 1% of all primary breast malignancies, pleomorphic sarcoma of the breast being even rarer. We present two cases of pleomorphic sarcoma of the breast in a 35-year-old and a 43-year-old female., CASE REPORT Pleomorphic soft tissue sarcoma metastatic to the skin of the scalp and groin Karl Staser, MD, PhD, a Charles E. Mount III, MD,a Jason Solus, MD,a,b and Amy Musiek, MDa St Louis, Missouri Key words: cutaneous metastases; pleomorphic sarcoma., Osteosarcoma and malignant fibrous histiocytoma (MFH) of the bone are diseases in which malignant (cancer) cells form in bone. Osteosarcoma usually starts in osteoblasts, which are a type of bone cell that becomes new bone tissue.Osteosarcoma is most common in adolescents.It commonly forms in the ends of the long bones of the body, which include

bones of the arms and legs., Undifferentiated High-grade Pleomorphic Sarcoma (Malignant Fibrous Histiocytoma) Occurring in the Nerve Root: A Rare Case Report and Review of the Literature Tantan Liu1, Zhaoxiang Zhang2, Yingmei Wang3, Qing Li1,3 ..., Undifferentiated pleomorphic sarcoma (UPS), previously malignant fibrous histiocytoma (abbreviated MFH), is a type of cancer, namely a soft tissue sarcoma. It is considered a diagnosis of exclusion for sarcomas that cannot be more precisely categorized., Cancers 2013, 5 220 non-pleomorphic tumors for which pathogenomic molecular events have not been found to date, e.g., adamantinoma or chordoma. Category three sarcomas, are pleomorphic with some defined molecular changes and complex karyotypes including, dedifferentiated liposarcoma, malignant peripheral nerve, The term "Malignant Fibrous Histiocytoma" has been changed by the WHO to Undifferentiated Pleomorphic Sarcoma Not Otherwise Specified. The mainstays of treatment for MFH are complete surgical excision most often supplemented with adjuvant radiation therapy.
