System Simulator for Engineering

(PSS® often written as PSS/E) is a

software tool used by power system

engineers to simulate electrical power

transmission networks in steady-state

conditions as well as over timescales of a

few seconds to tens of seconds.. Since its

introduction in 1976, it has evolved from a

simple command-line interface, to an

integrated, interactive program for ...,

Introduction- STEAM POWER PLANT: A

thermal power station is a power plant in

which the prime mover is steam driven.

Water is heated, turns into steam and spins a

steam turbine which drives an electrical

generator. After it passes through the

turbine, the steam is condensed in a

condenser and recycled to where it was

heated; this is known as a Rankine cycle.,

power system is a network of electrical

components deployed to supply, transfer,

and use electric power. An example of an

electric power system is the grid that

provides power to an extended area. An

electrical grid power system can be broadly

divided into the generators that supply the

power, the transmission system that carries

offers. This classic text offers you the key to understanding short circuits, open conductors and other problems relating to electric power systems that are subject to unbalanced conditions. Using the method of symmetrical components, A communication system consists of a transmitter, a receiver and communication channels. Type of medias and network topologies in communications provide different opportunities to advance the speed, security, dependability, and sensitivity of protection relays. Power Grid Corporation of India Limited (POWERGRID), is an Indian state-owned electric utility company headquartered in Gurugram, India. POWERGRID transmits about 50% of the total power generated in India on its transmission network., The focus of this paper is to describe the losses that occur in the transmission system, present component models, and investigate ways to reduce these losses. Like all other power system systems, no matter how carefully the system is designed, losses are present and must be modeled before an accurate
