OBJECTIVE Lab Viva Mcqs., KISS is an

acronym for "Keep it simple, stupid" as a

design principle noted by the U.S. Navy in

1960. The KISS principle states that most

systems work best if they are kept simple

rather than made complicated; therefore

simplicity should be a key goal in design, and

that unnecessary complexity should be

avoided., Concept. The fundamental notion

behind the end-to-end principle is that for two

processes communicating with each other

via some communication means, the

reliability obtained from that means cannot

be expected to be perfectly aligned with the

reliability requirements of the processes., HI
