INTRODUCTION: Electromagnetic theory is

concerned with the study of charges at rest

and in motion. Electromagnetic principles are

fundamental to the study of electrical

engineering. Electromagnetic theory is also

required, An electromagnetic lock, magnetic

lock, or maglock is a locking device that

consists an electromagnet and an armature

plate. There are two main types of electric

locking devices. Locking devices can be

either "fail safe" or "fail secure". A fail-secure

locking device remains locked when power is

lost., In electronics, impedance matching is

the practice of designing the input

impedance of an electrical load or the output

impedance of its corresponding signal source

to maximize the power transfer or minimize

signal reflection from the load.. In the case of

a complex source impedance Z_S and load

impedance Z_L , maximum power transfer is

obtained when $Z_L = Z_S^*$ — where the asterisk

indicates the ..., International Journal of

Engineering Research and Applications

(IJERA) is an open access online peer

reviewed international journal that publishes

research ..
