describes the theory and a wide range of applications in both electric and magnetic fields., able application in process FTIR is the dual moving corner reflector design employed in the Bomem Michelson Series in-struments and illustrated in Fig. 3 (8). Like the refractively scanned interferometer, this design can be essentially perma-nently aligned. This is made possible by taking advantage of two characteristics of corner reflectors., chapter concludes with some examples of successful real-world applications of O.R. * Maynard's Industrial Engineering Handbook, 5. th.
