Principles of Evolution Principle of the Origin of Species: Species originate by evolution from pre-existing forms by means of natural selection., When published in 1971, Principles of Paleontology (POP) by David Raup and Steven Stanley revolutionized both textbooks and teaching in paleontology by adopting an approach that focused on the process of studying biologic groups, rather than a systematic approach (the study of individual groups of organisms), or an historical approach (narrating events to date)., Principles of Evolution Principle of Evolution: Living things have evolved through time in an orderly fashion, without repetition or reversal, to produce modern life. Description : The leading textbook in its field, this work applies paleobiological principles to the fossil record while detailing the evolutionary history of major plant and animal phyla. It incorporates current research from biology, ecology, and population genetics., Paleontology is considered a subdiscipline of geology, and as such, students will develop a basic understanding of fundamental principles of geology. major groups of fossil organisms., When David Raup and Steve Stanley published the first two editions of the Principles of Paleontology in 1970 and 1978, most palaeontologists were somewhat puzzled or amazed.
