Photosynthesis: When life originated on this

planet some 3.8 billion years ago, the first life

forms were single celled heterotrophs.,

Bioenergetics is a field in biochemistry and

cell biology that concerns energy flow

through living systems. This is an active area

of biological research that includes the study

of the transformation of energy in living

organisms and the study of thousands of

different cellular processes such as cellular

respiration and the many other metabolic and

enzymatic processes that lead to production

..., The history of biochemistry can be said to

have started with the ancient Greeks who

were interested in the composition and

processes of life, although biochemistry as a

specific scientific discipline has its beginning

around the early 19th century. Some argued

that the beginning of biochemistry may have

been the discovery of the first enzyme,

diastase (today called amylase), in 1833 by

Anselme ..., Introduction 3 2. Informational

biochemistry defines the language(s) for

storing biological data and for transmitting

that data in cells and organisms. This area

includes molecular genetics, which describes

the molecular processes in heredity and
