belief network, Bayes(ian) model or

probabilistic directed acyclic graphical model

is a probabilistic graphical model (a type of

statistical model) that represents a set of

variables and their conditional dependencies

via a directed acyclic graph (DAG). For

example, a Bayesian network could

represent the probabilistic relationships

between diseases and symptoms., In the

analysis of data, a correlogram is an image

of correlation statistics. For example, in time

series analysis, a correlogram, also known

as an autocorrelation plot, is a plot of the

sample autocorrelations versus (the time

lags).. If cross-correlation is used, the result

is called a cross-correlogram.The

correlogram is a commonly used tool for

checking randomness in a data set.,

Computing., Gaussian Processes and Kernel

Methods Gaussian processes are

non-parametric distributions useful for doing

Bayesian inference and learning on unknown

functions. They can be used for non-linear

regression, time-series modelling,

classification, and many other problems.,
