The book is the textbook for the programming languages course at Brown University, which is taken primarily by third and fourth year undergraduates and beginning graduate (both MS and PhD) students. It seems very accessible to smart second year students too, and indeed those are some of my most successful students.

Programming Languages: Principles and Paradigms Allen Tucker and Robert Noonan Errata list for first printing (October 2001) - lists all corrections as of January 20, 2003.

Principles are reinforced with numerous

examples from contemporary languages.

There are individual chapters on functional, object-oriented, and logic languages, as well as history, design principles, parallel programming, and formal semantics.
