Threaded programming is particularly well
suited to network programming where it
helps alleviate the bottleneck of slow network

Shared Memory Programming Several
Thread Libraries/systems " Pthreads is the POSIX Standard Relatively low level
Portable but possibly slow; relatively heavyweight, In shared memory
multiprocessor architectures, threads can be used to implement parallelism. Historically,
hardware vendors have implemented their own proprietary versions of threads, making
portability a concern for software developers.
For UNIX systems, a standardized C language threads programming interface has
been specified by the IEEE POSIX 1003.1c standard. Implementations that adhere to this
standard are referred to as POSIX threads, or Pthreads., used for programming with

other thread APIs (NT threads, Solaris threads, Java threads, etc.) as well. " Provides two basic functions for specifying concurrency:
