univariate (single-variable) quadratic function has the form $y = ax^2 + bx + c$ in the single variable

x . The graph of a univariate quadratic function is a parabola whose axis of symmetry is parallel to the y -axis, as shown at right., 13 .

Another solving method for quadratics is completing the square. The goal is to get the left side of your equation to be in the form of $(x+h)^2$ so that you can take the _____

_____ of both sides., Resources Lesson (complete) quadratic functions r1.pdf (1325.7K PDF) (1325.7K PDF/Acrobat 08 Feb 2016);

ways to solve the quadratic equation instead of using the quadratic formula, such as factoring, completing the square, or
