ROBOT ANALYSIS AND CONTROL ASADA

PDF - Search results, A robot is a machine—especially one programmable by a computer—capable of carrying out a complex series of actions automatically. Robots can be guided by an external control device or the control may be embedded within. Robots may be constructed to take on human form but most robots are machines designed to perform a task with no regard to how they look., A humanoid robot is a robot with its body shape built to resemble the human body. The design may be for functional purposes, such as interacting with human tools and environments, for experimental purposes, such as the study of animal locomotion, or for other purposes. In general, humanoid robots have a torso, a head, two arms, and two legs, though some forms of humanoid robots may model only part ... , IEEE ICECS Int'l Conf. on Electronics, Circuits and Systems Tel-Aviv, Israel, December 2004 NANOROBOTIC CHALLENGES IN BIOMEDICAL APPLICATIONS, DESIGN, Failure Mode and

Effects Analysis based on FMEA 4 th Edition
