keywords & suggestions bobcat 316 service

manual descriptions and articles about the

long-spined, Echinoderms have an internal

skeleton made of bony plates (ossicles) of

calcium carbonate. They deposit this material

after extracting dissolved calcium and

carbonate (bicarbonate) ions from sea water.

In some species, such as the sea urchin,

plates of the skeleton are locked together to

form a rigid structure., some species, such

as the sea urchin, plates of the skeleton are

locked together to form a rigid structure. On

the other hand, most sea stars and brittle

stars can flex their "arms", indicating

that the skeleton has gaps and flexible plate

junctions. Sea cucumbers have no real

skeleton; only tiny remnant ossicles. Many

echinoderms have spines., Teacher
