Discriminant Analysis¶. Linear Discriminant

Analysis

(discriminant_analysis.LinearDiscriminantAn

alysis) and Quadratic Discriminant Analysis

(discriminant_analysis.QuadraticDiscriminant

Analysis) are two classic classifiers, with, as

their names suggest, a linear and a quadratic

decision surface, respectively., , In numerical

analysis, polynomial interpolation is the

interpolation of a given data set by the

polynomial of lowest possible degree that

passes through the points of the dataset., In

mathematics, a quadric or quadric surface

(quadric hypersurface in higher dimensions),

is a generalization of conic sections (ellipses,

parabolas, and hyperbolas).It is a

hypersurface (of dimension D) in a $(D +$

$1)$ -dimensional space, and it is defined as the

zero set of an irreducible polynomial of

degree two in $D + 1$ variables ($D=1$ in the ...,
