for your academic textbook then you are in the right place, In fluid dynamics, drag

(sometimes called air resistance, a type of friction, or fluid resistance, another type of

friction or fluid friction) is a force acting opposite to the relative motion of any object

moving with respect to a surrounding fluid. This can exist between two fluid layers (or

surfaces) or a fluid and a solid surface. Unlike other resistive forces, such as dry

friction, which ..., Join Physics Forums Today! The friendliest, high quality science

phenomenon by which all things with mass or energyâ€”including planets, stars, galaxies, and even light â€”are brought toward (or gravitate toward) one another. On Earth, gravity gives weight to physical objects, and the Moon's gravity causes the ocean tides. The gravitational attraction of the original gaseous matter present in the Universe caused it to ...
