Thermodynamics - Smith Van Ness,  
Thermodynamics is the branch of physics  
concerned with heat and temperature and  
their relation to energy and work. The  
behavior of these quantities is governed by  
the four laws of thermodynamics, irrespective  
of the composition or specific properties of  
the material or system in question. The laws  
of thermodynamics are explained in terms of  
macroscopic constituents by statistical  
mechanics., In thermodynamics, the bubble  
point is the temperature (at a given pressure)  
where the first bubble of vapor is formed  
when heating a liquid consisting of two or  
more components. Given that vapor will  
probably have a different composition than  
the liquid, the bubble point (along with the  
dew point) at different compositions are  
useful data when designing distillation  
systems., Buy Thermodynamics and

della fisica classica che studia e descrive le  
trasformazioni termodinamiche indotte dal  
calore e dal lavoro in un sistema  
termodinamico, in seguito a processi che  
coinvolgono cambiamenti delle variabili di  
stato temperatura ed energia.. La  
termodinamica classica si basa sul concetto
