PDF - Search results, A solid-propellant  
rocket or solid rocket is a rocket with a rocket  
engine that uses solid propellants  
(fuel/oxidizer).The earliest rockets were  
solid-fuel rockets powered by gunpowder;  
they were used in warfare by the Chinese,  
Indians, Mongols and Persians, as early as  
the 13th century., In ballistics and  
pyrotechnics, a propellant is a generic name  
for chemicals used for propelling projectiles  
from guns and other firearms.. Solid  
propellants are usually made from  
low-explosive materials, but may include  
high-explosive chemical ingredients that are  
diluted and burned in a controlled way  
(deflagration) rather than detonation.,
