STEPHEN BOHR PDF - Search results, Niels Henrik David Bohr (Danish: [niels ˈbø̃ː]; 7 October 1885 – 18 November 1962) was a Danish physicist who made foundational contributions to understanding atomic structure and quantum theory, for which he received the Nobel Prize in Physics in 1922. In atomic physics, the Bohr magneton (symbol  $\mu_B$ ) is a physical constant and the natural unit for expressing the magnetic moment of an electron caused by either its orbital or spin angular momentum. Anyone who is not shocked by quantum theory has not understood it. Bohr said this sentence in a conversation with Werner Heisenberg, as quoted in: "Der Teil und das Ganze. A quantum catechism: An alternative, elementary treatment of atomic quantum theory.", 1961. Overzichtspagina links artikel behorend bij: Gedwongen medewerking debt for equity swap?
