Send questions or comments to doi ..., An ecosystem is a community made up of living organisms and nonliving components such as air, water, and mineral soil. Ecosystems can be studied in two different ways. They can be thought of as interdependent collections of plants and animals, or as structured systems and communities governed by general rules. The living and non-living components interact through nutrient cycles and energy flows., Home page for AP students, prospective students and their families. The College Boardâ€™s AP courses are college-level classes in a wide variety of subjects that you can take while still in high school., Pollen is a fine to coarse powdery substance comprising pollen grains which are male

microgametophytes of seed plants, which produce male gametes (sperm cells). Pollen grains have a hard coat made of sporopollenin that protects the gametophytes during the process of their movement from the stamens to the pistil of flowering plants, or from the male cone to the female cone of coniferous plants., Doc Brown's Chemistry Clinic- general review/revision site for UK GCSE, AS and A2 chemistry and USA/Canada grades 9-12. Revision notes, multiple choice tests, structured questions, graphics and extensive links to useful and interesting CHEMISTRY sites., This site provides annotated Web links to instructional materials and other resources of interest to Chemistry teachers and course designers. The links are carefully selected to represent what this author considers to be the most useful and exemplary Web-accessible resources that others can draw upon for ideas and materials., Tumor Necrosis Factor (TNF), initially known for its tumor cytotoxicity, is a potent mediator of inflammation, as well as many normal physiological functions in homeostasis and health, and anti-microbial immunity.
