Strength depends upon material properties. The strength of a material depends on its capacity to withstand axial stress, shear stress, bending, and torsion. The strength of a material is measured in force per unit area (newtons per square millimetre or N/mm^2 , or the equivalent megapascals or MPa in the SI system and often pounds per ... , 4 BACKGROUND A diaphragm is a large, flat structural unit acting like a deep, thin beam. In plywood diaphragms, the plywood sheathing is the "web" of the beam and the edge framing (chords) are the,
