Bronchitis (bron-KI-tis) is a condition in which the bronchial tubes become inflamed. These tubes carry air to your lungs. (For more information about the bronchial tubes and airways, go to the Diseases and Conditions Index How the Lungs Work article.). People who have bronchitis often have a cough that brings up mucus. Mucus is a slimy substance made by the lining of the bronchial tubes.

People who are AB blood type have a different set of characteristics than people who are types A, B or O - they are susceptible to different diseases, they should eat different foods and exercise in a completely different manner.

AHRQ offers

the latest evidence-based information for improving your health, Furthermore, these aldosterone antagonists (potassium sparing diuretics) appear to more effective in increasing blood potassium in the morning and ineffective in the evening.
