This is the core of the phenomenon commonly described as "mode dropping": when there are large regions with high values of  $P$ , A minimum spanning tree (MST) or minimum weight spanning tree is a subset of the edges of a connected, edge-weighted (un)directed graph that connects all the vertices together, without any cycles and with the minimum possible total edge weight. That is, it is a

More generally, any edge-weighted undirected graph (not necessarily ..., In light microscopy, oil immersion is a technique used to increase the resolving power of a microscope.
