Allen Thermoplastic composites are

composites that utilize a thermoplastic

polymer as a matrix with a reinforcement

matrix that can consist of another, biodegradable matrix [4]. Bio-based composites made from natural/biofiber and biodegradable polymers are referred to as green composites. These can be further subdivided as hybrid composites and textile composites. Hybrid composites comprise of a combination of two or more types of fibers.

1.2.1 Polymer Matrix Composites

Most commercially produced composites use a polymer matrix material often called a resin solution. Current Thermoplastic Composite Materials Today, thermoplastic composites are still a niche market, occupying only 10% of the composites markets [9]. Thermoplastics are typically 500 to 1000 times more viscous than thermoset resins which tends to hinder the infusion of polymer into the reinforcing substrate [9].
